

SELECTED EXPERIENCE & PROJECT ROLES

John Eja

Survey123 form development & backend data support

I have a background in statistics and support field survey systems, working independently and with my seven-person team. I can personally handle a defined technical assignment and involve my team when broader support is needed.

Technical capabilities

Forms: Build and modify Survey123/XLSForms; test logic, validation and recording consistency.

Survey operations and QA: Sampling and assignments; duplicate detection; GPS checks; backend data-quality monitoring.

Outputs: Clean Excel/CSV and survey datasets; produce statistical tables, charts, maps and reports using Excel and ArcGIS.

Selected project experience

Central Bank of Nigeria cash-access survey

Purpose: Examine how people obtain cash across communities.

My role: Worked within the backend team supporting the existing survey system and resulting datasets.

Nationwide ward-enumeration exercise

Purpose: Document existing ward resources and development needs.

My role: Worked within the backend team supporting the existing survey system and resulting datasets.

Development-sector context

My experience includes work through teams implementing survey programmes supported by international partners, including WHO, UNFPA and the World Bank. I worked to agreed methodologies, maintained confidentiality and supported data quality and reporting.

Remote collaboration

My ongoing freelance writing work, including contributions to Cardlines, has involved client briefs, deadlines, revisions and email communication. This is additional remote-working experience alongside my survey and data background.
